

Our Experience

Maule Systems have planned, designed and implemented all major solutions:

- Identity Management with Novell Identity Manager for eDirectory to Active Directory®, Lotus Notes® JDBC compliant databases (MS-SQL, Informix, MY-SQL etc.) synchronisation. Accounts and passwords dynamically synchronise between systems.

- SUSE Linux Enterprise Server & Open Enterprise Server on Linux.

- Password Management with SecureLogin for government agencies.

- Resource management with ZENworks Suite, including ZENworks for Servers & Desktops, Patch Management and Asset Management.

- Security audits of eDirectory and Novell services. There are many companies that provide a security audit service but few who have the in-depth experience and understand Novell products.

- Server migrations and upgrades. NetWare to NetWare/OES, and NetWare to Windows.

- GroupWise implementations working through our allied partners.
